ADVANCED DATABASE SYSTEMS DEVELOPMENT PROJECT PRESENTATION

Lecturer:

Mr. T. Hungwe

Student: Mr R Chabalala – 201806940

The Task

- To create an online admission system for a university (SMU) that still uses a manual application system

Website Functionality

- You can create your own account as a user and apply for courses available at SMU

- Your application remaining pending until the admin can approve it

- Login details to the student portal must get them from the admin

- You can enrol a module on your student portal

- You can view your profile and what you have been registered for

- You can display the modules you have been registered for

- Change password

- Generate Student card

Challenges Faced

- Sending an email to accepted applicants with the student login details (student portal).

- How to secure web pages.
